1. Charts need to be renewed (Reports of the last 24 hours diagram, Map and most reported problems pie chart.)

   a. There are charts on https://www.harzerliebe.de/status/**_provider_** sites, one of them is a line chart, done with chart.js and needs to be redesigned like the attached example. The "logo" of each provider should be displayed exactly as it is now.

   b. The other one is a pie chart with some hover effects. Instead of this pie chart, we need a modern doughnut chart (like the example attached) with the info as legend and not "hover info"

   c. The line chart settings must be copied also to the "mini" charts at home page

2. Furthermore, unnecessary javascript and css would have to be cleaned up and the source code should be optimized.

   a. We have a lot unused Javascript in our main script.js file. This file must be cleaned up as much as possible in consideration of Pagespeed/loading time

   b. The same for our css files

3. Adding some custom fields to the backend and show it in the frontend: Meta Title + Meta Description field for each provider

   a. We have an admin Backend for adding new "provider" and to do some settings.

   b. URL: https://www.harzerliebe.de/dashboard/admin

      i. Login

         E-Mail: dev@harzerliebe.de

         Password: Katze123!

   c. Example: https://www.harzerliebe.de/dashboard/admin/anbieter?provider=572

      i. We need the possibility to manually change the Meta title & meta description of a particular site/provider

      ii. But if we don't fill in these two fields, there should be the default one, given by our language resources php files

4. link providers between among each other from a selected categorie

   a. inside the backend, we have the option to categorize a provider in a category. Now we want to show 5 similar providers from one category in the frontend on a provider detail page. (see file below)
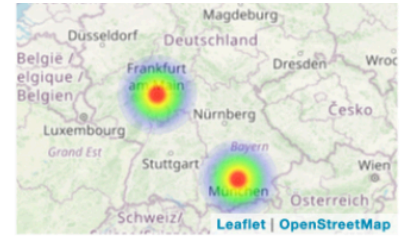

History

Common problems are:

- Ich will zocken
- Blabla
